BUILT TO LAST

Our flexible protection barriers are designed with durability and longevity in mind. Constructed from high quality materials, these barriers are designed to withstand the harshest conditions, providing reliable year-round protection. Each product is rigorously tested to meet the highest safety and performance standards, offering unparalleled durability in any environment.

Whether used in industrial, commercial or outdoor areas, our barriers are built to last.

The innovative design allows for easy installation and maintenance, while providing maximum safety and flexibility. Invest in timeless protection with our reliable, long-lasting solutions.

WHAT IS ?
Flexible Barrier

RAYSAN flexible barrier is much more advantageous in terms of labor and cost since it does not require maintenance and repair compared to metal barrier.

At the same time, it has a much longer life since there is no corrosion factor that will occur in metal barrier. It can be safely applied in sectors that require special and careful production areas such as food and chemistry because it does not create interference.

STRONG AND LIGHTWEIGHT
Thanks to its unique chemical formula, our barrier surpasses steel barriers in both strength and weight. It is significantly lighter while maintaining its exceptional durability.

MODULAR
Thanks to its modular design, our barrier effortlessly adapts to the changing needs of your facility. This flexible solution is extremely easy to install, assemble, disassemble, relocate and organize.

NO CORROSION
Unlike steel barriers, our barriers are made of durable polymer materials, making them unaffected by environmental elements such as sunlight and rainwater.

NO PAINT AND MAINTENANCE NEEDED
Unlike Raysan's steel barriers that require regular painting and maintenance, our self-colored structure eliminates the need for these processes. Even if the barrier is scratched due to an impact, its surface retains its original color without any change.

ULTRAVIOLET RESISTANT
Our barriers are designed with exceptional resistance to UV radiation. Their chemical structure remains intact even after prolonged outdoor use, ensuring long-term durability.

ANTIBACTERIAL
Our barriers have an exceptional chemical formula that prevents them from having any chemical reaction with the substances they come into contact with.

WE BUILT TRUST

As Raysan, our main goal is to ensure occupational health and safety. It is the protection of buildings, vehicles and equipment, infrastructures and most importantly workplaces by offering fast and optimal products to the changing and developing needs of the industry globally.

Raysan is the only domestic company in Turkey that develops high-tech plastic raw materials and produces high quality and innovative flexible, durable and highly efficient safety barriers by developing and testing high-tech plastic raw materials to replace steel barriers in harsh working environments such as industrial buildings, logistics warehouses, production facilities, chemical production, storage facilities and airports.

Raysan is committed to providing solutions that meet the expectations and special needs of its customers by using the advantage of being a manufacturer. We create our value chain with a passion for customer satisfaction and continuous self-improvement.

SUSTAINABILITY

Our company has adopted the principle of 100% recycling and sustainability in our production processes and business operations, considering not only today but also future generations.

"Because we know that natural resources are finite and it is the responsibility of all of us to protect our planet."

OUR QUALITY POLICY

As Raysan Barrier, we work with determination and passion to ensure that our products and services are customer-oriented. In order to make our quality system sustainable, we continuously support our employees with trainings on local and international quality standards in our production and field applications.

TRAFFIC & SAFETY BARRIERS

Flexible barrier products designed by our engineers to protect both your production equipment and your staff in the new generation occupational health and safety systems, designed in accordance with the needs of the era.

There are products that different sectors need for different occupational safety, while the flexible barrier offers products suitable for almost all sectors. Models of different types and diameters for their needs, with a 1R barrier with a height limit to protect low-rise equipment and shelf ends.

With the different models of the 1R barrier designed for the ground and a little above, you can reach a height of 1 meter and provide pedestrian discomfort. The basic protection point remains at the ground and slightly above.

RACK PROTECTION

Protect your shelves, whose storage bodies are the most valuable structure, with our flexible protections. With special products, you will climb the feet of your shelves and the ends of the shelves with our curtains. As the basic area for the protection of the shelves, you can protect the shelf legs and the head and end areas of the shelves, as well as you can use pallet stop barriers to prevent distribution accidents when pallets are placed behind your shelves. Effective and operationally impressive against infrastructure impacts of shelves and warehouses with shelf protection products.

BOLLARDS & KERBS

As with flexible barriers, you can take special security measures with our flexible and strong pontoons and floor barriers. Our flexible pontoons are generally used in parking lots and at the corners of entry and exit points.

Our flexible ground barriers, on the other hand, are offered as an option to our other barriers and provide security support to our barriers at the ground zero point. Thanks to this support, it provides protection against the blades of carrier vehicles such as forklifts and pallet trucks.
